Garth "The Net Yeti" Johnson

More info will be provided soon. For now, I am a technology enthusiast/professional, full-time instructor at Bellingham Technical College. I have a passion for community integration and creating educational opportunities for *all*. I am a Dad and a Grandfather, the husband of a wonderful woman who keeps me from coloring *too* far outside the lines, and a general ally to all.

- My Linked-In page.
- Some of the (mostly local) groups/organizations that I am involved with and that you will find me at:
 - LinuxFest NorthWest
 - Cascade Steam
 - Bellingham Linux Users Group
 - Bellingham Makerspace
 - Bellingham Codes
 - Calgary University Technology Advisory Committee
 - BTC Raspberry Piclub
 - ... and others.

Lilian Miller

About Me

I'm a student at Bellingham Technical College, making my way through the tech world. I love solving challenges and figuring out how things work—whether it's through CTFs, homelabs, or experimenting with new tech. Lately, I've been diving into my Proxmox homelab, trying to wrap my head around Docker (🐳) . Beyond the technical side, I'm passionate about creating a more inclusive and welcoming space in IT, especially for women entering the field. I want to help break barriers and make tech a place where everyone feels like they belong!

Some fun facts: I have a deep appreciation for '70s and '80s music—especially rock, metal, and new wave. Rush, in particular, is the greatest band of all time (and I will debate this). When I'm not combing through a band's entire discography, I'm probably watching one of my comfort shows/movies. I have a soft spot for anything science fiction or historical—Doctor Who and Pride & Prejudice being personal favorites. ♡ 🍷 ('▽^🍷)

In my rare moments of non-tech-related productivity, I like to crochet and knit, because having a backup plan as a sweater artisan seems reasonable in this day and age (🧶 🍷-)💎. I'm also teaching myself electric guitar, though at this rate, I should just stick with the techy stuff...
